

Global Security Forum: Next appointment on November 29th & 30th in Milan at ID WORLD 2006

Wise Media has disclosed the conference agenda for the next Global Security Forum, taking place on November 29th and 30th at the heart of the fifth ID WORLD International Congress - the annual world summit on automatic identification.

After the outstanding success of the June 2006 launch in Vienna in the presence of the Austrian Minister of Interior Liese Prokop, the Global Security Forum goes live for the second time with an event focusing on physical and logical access control. The second Global Security Forum represents a highlight of ID WORLD 2006, disclosing the new frontier of security solutions and enterprise automation, and hosting the première of the new Registered Traveler Forum.

With people gaining unauthorized access to premises, restricted areas and networks, installing malicious software, disseminating viruses and giving private credentials to friends or colleagues, the task of protecting property has become ever more complex. The two day Global Security Forum conference held at ID WORLD will assess what level of security we can expect from traditional and emerging access control technologies and will question how far we are from completely automatic buildings that cater for our safety and comfort in our private and professional environments.

The sessions scheduled at the November 2006 Global Security Forum are:

- Security technologies in the global village
- Access control in public and private areas
- Building Automation: eOffices & eHomes
- IT security and logical access control
- Data protection in the era of digitalization
- The rise of Registered Traveler Programs.

Among the keynote speakers are Philippe Melchior (General Inspector of the French Administration - Ministry of Interior France), Dr Frank Paul (Head of Unit, Large-scale IT systems - European Commission), Frits Bosch (Director - Schiphol Airport), Bruno Sebastiani (Risk Security Officer - UniCredit Group) and Gordon Hannah (Managing Director, Public Sector Security and Identity Management Group - BearingPoint).

Signature sponsors of the Global Security Forum, IBM and Unisys, will also present papers at the conference. Paul McKeown, from IBM Global Business Services, and Roberto Tavano, from Unisys, both feature in session six of the conference, "The rise of Registered Traveler Programs." The session acts as a première for the first ever two-day Registered Traveler Forum that showcases in Paris next year from February 28th. About Unisys

Unisys is a worldwide systems integrator specializing in information technology services and solutions. We deliver value-based solutions led by our competency in consulting and systems integration, outsourcing, infrastructure services and security, combined with leading enterprise-class server and related technologies. We bring an unparalleled depth of expertise in the areas of administration and finance, justice and public safety, defense and domestic security, human services, education, and healthcare.

For more than five decades, Unisys has been helping governments around the world to better protect, serve and communicate with their citizens by helping them solve their most complex IT challenges. For further information visit: www.unisys.com

About the Global Security Forum

The Global Security Forum is the first worldwide summit on the holistic approach to security. It discusses the issues related to the policies, practices and technologies that need to be deployed to protect our society's most valuable assets: people, property and know-how. The Global Security Forum 2006 - organized by Wise Media – was endorsed by the European Commission and the Austrian Federal Minister of the Interior, Ms. Liese Prokop.
